

L.O. I am learning to multiply 2-digits by 1-digit (no exchange)

Partitioning

Partitioning can be a very useful way to help us when we are multiplying a 2-digit number by a 1-digit number but it is important that we include all of the steps when we are doing this.

Step 1. Read the multiplication calculation!	Example: $32 \times 3 =$
Step 2. Partition the 2-digit number.	
Step 3. Multiply each part of the partitioned numbers by the other number in the calculation.	Here we have 30 which is 3 tens. This is the same as multiplying 10 by 3, three times. $10 \times 3 = 30$ $10 \times 3 = 30$ $10 \times 3 = 30$ We also have 2 ones. This is the same as multiplying 2 by 3. $2 \times 3 = 6$
Step 4. Add the answers to the calculations together!	We need to add all of our answers together. $10 \times 3 = \underline{30}$ $10 \times 3 = \underline{30}$ $10 \times 3 = \underline{30}$ $2 \times 3 = \underline{6}$ $30 + 30 + 30 + 6 = 96$
Step 5. Answer the calculation!	$32 \times 3 = 96$

<p>ANSWERS</p> <p>$11 \times 2 =$</p>		$10 \times 2 = 20$ $2 \times 1 = 2$ $20 + 2 = 22$ $11 \times 2 = 22$
