

# MATHS LEGO CHALLENGE!

Tim uses four wheels to make each LEGO car. He counts up and sees that he has 52 wheels. How many cars can he make in total?

Tim would be able to make 13 cars.

I know this because  $13 \times 4 = 52$

How many LEGO cars could Tim make if he had 29 wheels?

Tim would be able to make 7 cars. He would have 1 wheel left over!

I know this because  $7 \times 4 = 28$
