

# Science

## Task 1:

- Choose a famous person who is quite old! (And I mean in their 70's or 80's, not their 40's!) Some examples could be the Queen, Dame Judi Dench, Sir Paul McCartney or Pelè.
- Find 4 photographs of them from different stages in their adult lives, (the photos should show a lot of change) and then copy these photos into a new Google slides presentation.
- Label these photos with the physical changes that you can see have happened over the years.

## Challenge:

- Can you find out why people get older and begin to look different? Write a short paragraph in your Google slides presentation from task 1.

*Sir Anthony Hopkins at different ages as an adult:*
