

CALCULATE PERIMETER

GET READY

1) An equilateral triangle has a side length of 13 m.  
What is its perimeter?

2) Jack measures two sides of an isosceles triangle.  
One side is 6 cm and the other is 4 cm.  
What are the two possible perimeters of the  
triangle?

10 cm      14 cm      16 cm      24 cm

3) A square has a 10 cm side.  
An equilateral triangle has a 12 cm side.  
Which shape has the greater perimeter?

- 1) An equilateral triangle has a side length of 13 m.  
What is its perimeter?

$$13 \text{ m} \times 3 = 39 \text{ m}$$

- 2) Jack measures two sides of an isosceles triangle. One side is 6 cm and the other is 4 cm. What are the two possible perimeters of the triangle?

10 cm      14 cm ✓      16 cm ✓      24 cm

- 3) A square has a 10 cm side.  
An equilateral triangle has a 12 cm side.  
Which shape has the greater perimeter?

The square

Square:  $10 \times 4 = 40$  cm

Equilateral triangle:  $12 \times 3 = 36$  cm

LET'S LEARN

$$12 \text{ cm} \times 2 = 24 \text{ cm}$$

$$210 \text{ cm} \times 2 = 420 \text{ cm}$$

Have a think

$$180 \text{ cm} \times 2 = 360 \text{ cm}$$

The front of a garage is a rectangle 3 m high and 4 m wide.

The garage door is 70 cm shorter and 40 cm thinner on each side than the garage.

4m = 400 cm Have a think

3m = 300 cm

What is the perimeter of the garage door?

$$320 + 230 = 550 \text{ cm}$$

$$550 \times 2 = 1,100 \text{ cm}$$
