

If I know my 2 times-table,  
I can find my 8 times-table by  
doubling and then doubling again.

# True

The 8 times-table can be derived from the 2 times-table by doubling the answer then doubling it again.

$$8 \times 6 = 48$$

$$2 \times 6 = 12$$

$$\text{Double } 12 = 24$$

$$\text{Double } 24 = 48$$
